

ENERGY EFFICIENCY POLICY

In order to protect our planet from potential threats, we are committed to using energy efficiently and setting targets to reduce our energy consumption.

To achieve this,

We follow national and international standards, laws, and regulations to fulfill both our environmental responsibilities and legal obligations. We voluntarily implement initiatives to reduce energy consumption and continuously improve our energy performance, while monitoring the outcomes of these efforts.

We set targets and include energy efficiency in our training programs to ensure the participation of our employees.

We value collaboration with all our stakeholders to create shared goals and outcomes in energy management. We strive to maintain active engagement with our guests, employees, visitors, and all business partners to raise comprehensive awareness and consciousness on these matters.

We seek, procure, and utilize energy-efficient products, equipment, tools, and technological alternatives.

We aim to document our Energy Management System, disseminate it across all departments, review, update, and continuously improve it as necessary.

We assess potential energy risks and emergency situations, such as energy constraints, and plan precautionary measures accordingly.
